DATE MAILED: 01/26/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/991,017

Applicant(s)

PETERSEN, PAUL M.

Examiner

Camquy Truong

Art Unit

2127

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 16 November 2001.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-30 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-30 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date 4/15/2002.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____.

DETAILED ACTION

1. Claims 1-30 are presented for examination.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1-13 and 7-10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

A. The claim language in the following claims is not clearly understood:

i. As to claim 1, it is not clearly understood the relationship between the stack of tasks, a queued task executable and a queued task.

ii. As to claim 7, it is not clearly indicated what a "taskq" is and how it relates with executed queued tasks.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Flood et al (U.S. Patent 6, 823, 351).

6. As to claims 1 and 21, Flood teaches the invention substantially as claimed including a method comprising:

Creating a first stack of tasks associated with a first thread (col. 4, lines 26-28; Fig. 4a, 4b and 4c; col. 6, lines 17-20);

Creating another stack of tasks associated with another thread (col. 4, lines 26-28; Fig. 4a, 4b and 4c; col. 6, lines 17-20);

Executing tasks on the first stack of tasks with the first thread (col. 4, lines 32-35; col. 6, lines 29-30; col. 7, lines 31-33);

Determining if the second stack of tasks contains a queued task executable by the first thread (col. 4, lines 51-52; col. 7, lines 51-53; col. 9, lines 2-10); and

Executing a queued task in the second stack by the first thread (col. 6, lines 31-32; col. 9, lines 2-5).

7. Flood does not explicitly teach that a second stack of tasks associated with a second thread. However, Flood teaches a separate work queue... is created for each thread (col. 4, lines 26-28). It would have been obvious to one of ordinary skill in the art at the time the invention was made that in fact Flood's

system provide a second stack of tasks associated with a second thread because it would minimizes interrupting or blocking of the owner's operation.

8. As to claim 14, Flood teaches:

Creating a plurality of threads each having a stack of queued tasks (col. 4, lines 26-28; Fig. 4a, 4b and 4c; col. 6, lines 17-20);

At least one thread executing tasks on its stack of queued tasks until no queued task remains in its stack of queued tasks that is executable by the thread and thereby becoming an idle thread (col. 4, lines 32-39; col.6, lines 30-31; col. 7, lines 46-51);

At least one idle thread searching a bit mask for a bit that is set indicating a thread that may have a task executable by an idle thread (col. 7, lines 51-56; col. 8, lines 16-30; col. 17, line 65- col. 18, lines 10);

In response to a set bit in the bit mask, at least one idle thread searching the stack of queued tasks owned by another thread for an available queued task that can be executed by the searching thread (col. 6, lines 29-32; col. 7, lines 50-55; col. 9, lines 2-10); and

If an available executable task is found, then an idle thread executes the available task (col. 6, lines 29-32; col. 8, line 65- col. 9, line 4).

9. As to claim 27, it reject for the same reason as claims 1 and 21. In

addition, Flood teaches:

A memory including a shared memory location (share common memory, col. 5, lines 27-28);

A set of at least one processor executing at least a first and second parallel thread (col. 4, lines 23-25; col. 5, lines 26-30).

10. As to claims 2 and 28, Flood determining the second stack of tasks has a queued task includes examining a bit mask (col. 8, lines 16-31; col. 17, line 65- col. 18, lines 10).

11. As to claim 3, Flood teaches locking the bit mask before the bit mask is examined (col. 4, lines 18-20; col.12, lines 11-13).

12. As to claim 4, Flood teaches searching the second stack of tasks to determine if the second stack of tasks has a queued task (col. 8, lines 16-31).

13. As to claim 5, Flood teaches locking the second stack of tasks by the first thread before it is searched (col.11, lines 42-43; col. 12, lines 11-13).

14. As to claims 6-15, Flood teaches changing a bit in the bit mask associated with the second thread if a queued task is not on the second stack of tasks (col.

9, lines 5-10).

15. As to claims 7-9, 16 and 24, Flood teaches changing a bit in a bit mask in response to executing a taskq task, which generates additional tasks (col. 8, line 65- col.9 line 5).

16. As to claim 10, Food teaches changing the bit in the bit mask includes changing a bit associated with the second thread indicating the second stack of tasks contains a task executable by the first thread (col. 17, line 65- col. 18, lines 10).

17. As to claim 11, Food teaches executing all executable tasks on the first stack of tasks before determining if the second stack of tasks contains a queued task (col. 6, lines 29-34; col. 7, lines 46-53).

18. As to claims 12-13, 20, 26 and 30, Food teaches causing the first thread to enter a wait state if the second stack of tasks does not contain a queued task executable by the first thread (col. 10, lines 58-63; col. 18, lines 3-6).

19. As to claims 17 and 22, Food teaches enabling an idle thread to search its stack of queued tasks for an available task that is executable in response to the

setting of a bit in the bit mask (col. 10, lines 30-42; col. 17, line 65- col. 18, lines 10).

20. As to claim 18, Food teaches queuing a task generated by the execution of a task generating task on the stack of queued tasks from which the task generating task was found (col. 8, line 65- col.9, line 5).

21. As to claim 19, Food teaches in response to the idle thread executing an available executable task, the idle thread searching its stack of queued tasks for an available task that is executable (col. 10, lines 38-42).

22. As to claims 23 and 25, Food teaches the bit mask has a bit associated with the second thread and the bit is changed if a queued task is not on the second stack of tasks (col. 17, line 65- col. 18, lines 10).

23. As to claim 29, Food teaches the first thread changes a bit in the bit mask associated with the second thread if the first thread executes an available task in the second stack that generates a task (col.18, lines 8-11).

Conclusion

24. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Camquy Truong whose telephone number is (571) 272-3773. The examiner can normally be reached on 8AM – 5PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Meng-Ai An can be reached on 571-272-3756. The fax phone number for the organization where this application or proceeding is assigned is 571-273-3756.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIP. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIP system, contact the Electronic Business Center (EBC) at 866-217-9197(toll-free).
